Operating Instructions

J001 JR Tool Adapter

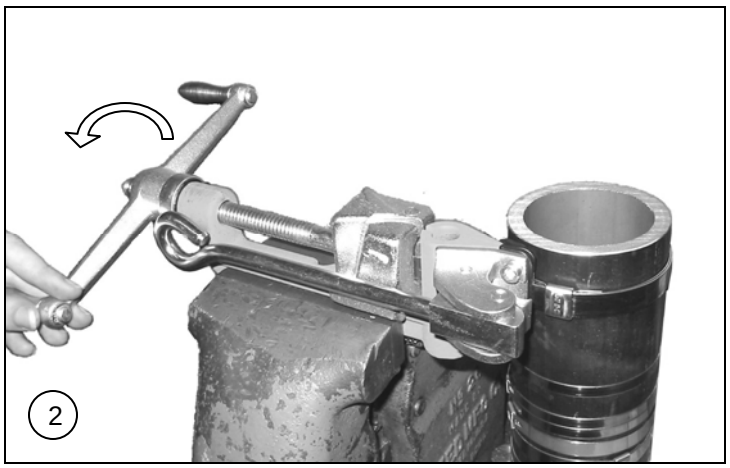

To Install a BAND-IT Junior Clamp:

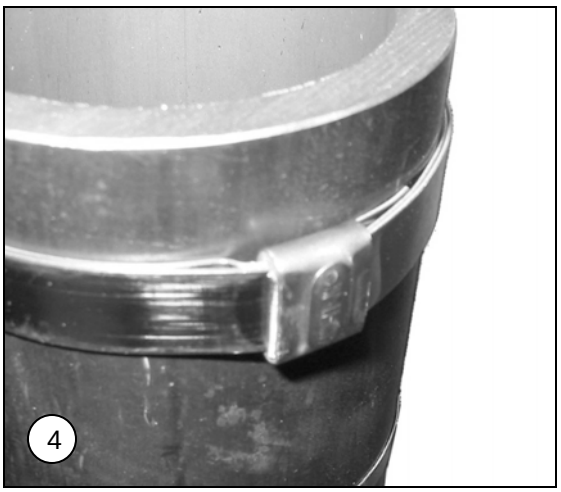

Place BAND-IT tool in vise. BAND-IT JR Adapter installs over nose of tool. Insert BAND-IT Junior or Junior SID Clamp in Tool and grip end of band by Band Gripper Lever contained in the slide block assembly of BAND-IT tool.

When properly tensioned, roll tool over hose, backing off tension handle ¼ to ½ turn only, through course of rollover, (depending on type and size of hose) until shear hook grips buckle edge. Push cutter handle forward in a quick motion to shear band, completing BAND-IT JR. Clamp.

Install clamp over hose assembly. Tension clamp by turning the handle of BAND-IT Tool clockwise. To feel movement of band, place finger on BAND-IT BAND at buckle edge while tensioning with tool handle. When you no longer feel band moving through buckle, MAXIMUM PRESSURE HAS BEEN EXERTED BY BAND-IT BAND.

Clamp is now locked and completed. Band will be bent upward 90° and have a cut-off edge that is flush or slightly higher than the buckle.

NOTE: USE OF VISE IS OPTIONAL
